

How to make a newspaper liner for kitchen caddy or container

Recycling your food waste is clean and easy with this do it yourself liner for your container

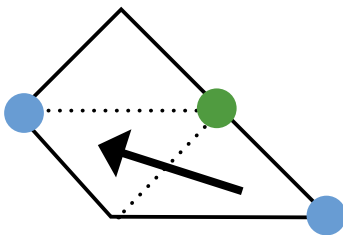

Step 1

Lay out a sheet of newspaper, fold down the top left corner to the bottom edge, and trim the extra edge so that when the triangle is unfolded, it is a square.

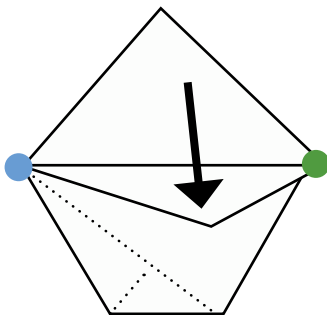

Step 2

Fold one corner to match the centre of the other two corners. From green to green.

Step 3

Then, fold the other corner over the last fold. From blue to blue.

Step 4

Unfold the two flaps at the top, folding them down either side.

Congratulations! You've made a liner that can be composted.
